thrivePCI

AN INTEGRATION TEST PRACTICE

A safe test boundary. An observed result.

Use an authorized test setting and synthetic data.

Keep release approval explicit. Keep evidence out.

Test boundary

Which environment and synthetic data are authorized?

Expected behavior

What should happen for this scenario?

Observed result

What happened, and what record supports it?

Defects and retest

Who owns the mismatch and the next check?

Release decision

Who can decide, and what remains open?

Make the test useful.

Compare the result with the plan.

Try the free responsibilities guide.
